

ALPHAGEN - CREATIVITY PACK

Image Capture Playback Instructions

For operation of the Image Capture System you will need:

- 1 Alphagen Creativity Pack w/ Image Capture

Congratulations on your purchase of the Alphagen Creativity Pack w/ Image Capture Playback system.

We are very pleased to bring this product to market. From our product research and user comments, adding Image Capture to our line of Character Generators has been the single most desired customer feature. Like Alphagen before it, Alphagen with Image Capture opens a new world where blocky text and solid backgrounds were the rule. Enjoy creating a whole new look for your audience, changing as much or as little as you desire. The choice is yours.

Alphagen Creativity Pack w/ Image Capture Playback is designed as a destination unit for images scanned with our Alphagen Image Capture system. This system is intended as a remote unit.

There is a new option under the Shift F9 menu. Import Image.

Select the type of disk you are using: PC or Amiga format. With Image Capture, high density and double density disks are supported. Alphagen can import GIF, IFF, TIFF and JPG image formats. The best results are obtained from images with 720 x 500 pixel resolution and 256 colors. Select the image(s) you want to import. The conversion process takes a couple minutes.

Once images are scanned or imported, these backgrounds are now available under F6 Background Image. Selecting an image background is identical to selecting an image from the CDROM.

Images are stored on the built-in internal 1.7 Gig Hard Drive. Several hundred images can be stored with a hard drive of this size. Scanned in backgrounds are brought up in the normal way under F6, **Page Background**. A new entry appears: Hard Drive. This is the location of your scanned images. From here the Alphagen System works identically as in the manual.

Thank you once again. And enjoy Alphagen Creativity Pack w/ Image Capture.
